Education

ITM Skills University

Bachelor of Technology in Computer Science

CGPA: 8.86/10 (1st Year)

Aug. 2024 – 2028

Navi-Mumbai, Maharashtra

Experience

COEP Technological University (Virtual Math Labs)

Sep 2025 – Present

Software Development Intern

Remote, India

- Developed automated content generation engines using **Java (Apache POI)** and **Python (OpenPyXL)**, enabling the bulk creation of 200+ unique datasets per batch.
- Implemented dynamic **SVG rendering** logic to programmatically draw geometric diagrams (lines, angles, vectors) that adapt in real-time to randomized numerical parameters.
- Engineered randomization algorithms to generate mathematically valid distractors (wrong answers) while ensuring non-collision with correct values.
- Integrated bilingual support (English and Marathi) using Unicode text processing to ensure accessibility for diverse student demographics.

Projects

PriceWatch (Live Production App) | MERN Stack

Dec 2025

- Engineered a real-time e-commerce price tracking platform using the **MERN stack** (MongoDB, Express, React, Node.js).
- Integrated **SearchAPI** to aggregate live product metadata across multiple vendors, ensuring reliable data retrieval without web scraping.
- Developed **Wishlist** functionality and **Price History Analytics**, enabling users to track long-term trends and identify optimal buying windows.
- Implemented **WebSockets (Socket.io)** for instant price-drop alerts and deployed the production application on **Render**.

Hackathon Registration Website | HTML, CSS, JavaScript, Google Apps Script

June 2025

- Developed a responsive event portal using **HTML, CSS, and JavaScript** to showcase hackathon tracks, timelines, and FAQs.
- Engineered a serverless backend using **Google Apps Script** to securely capture and process participant registrations.
- Integrated **Google Sheets** as a real-time automated datastore for efficient participant management.

Medical Research Data Analyzer | Python, MongoDB, Pandas, Trie Algorithm

Oct 2025

- Engineered a data pipeline to parse and migrate bulk CSV medical records into a **MongoDB** database for structured storage.
- Developed an interactive dashboard to visualize hospital metrics, transforming raw datasets into actionable insights.
- Implemented a **Trie data structure** to efficiently index and search standardized disease codes (e.g., ICD-10), optimizing lookup performance.

Technical Skills

Languages: Python, Java, C++, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: React.js, Node.js, Express.js, Socket.io, Mongoose, JUnit, Hyperledger Fabric

Databases: MongoDB, Supabase, Firebase, MySQL

Tools & Technologies: Git, GitHub, Docker, Kubernetes, Linux, Postman, REST APIs, AWS, Vercel, Render

Certificates: GenAI 101 with Pieces, Postman API Fundamentals Student Expert

Professional Summary

- Second-year Computer Science undergraduate and MERN Stack developer with production experience deploying scalable applications like PriceWatch. Passionate about bridging Full Stack development with AI/ML workflows and DevOps practices. A documentation-driven engineer who prioritizes deep understanding and independent problem-solving over passive learning.
